Thank you for calling me with an initial discussion of the Shaw Creek diversion, filling, dewatering, etc. There will be three documents attached today. One document shows some of the recent destruction of Shaw Creek on the Radke parcel at 8910 Tieton Drive, Yakima, WA. A second document has two photo from the Bainter parcel where Shaw Creek has been diverted (with filling of critical areas). A third document is a fairly short note that I recently drafted; the purpose of the note was to provide an overview for a biology inspection of the stream. The biology site visit was orchestrated by the lead agents with the Shaw Creek NEPA project (a planned redirection of the stream at a future time).
